

LoadSwitches

OVER 130 YEARS OF ELECTRICAL EXCELLENCE

Dorman Smith Switchgear Limited

With over 130 years of experience in switchgear design and production Dorman Smith Switchgear Limited continues to provide high quality equipment for low-voltage electrical distribution and circuit protection.

Our product range begins with single-pole and neutral distribution board systems and continues up to custom designed, factory built low-voltage electrical switchboards for a broad range of commercial, industrial and retrofit applications.

We continue to build on our extensive technical knowledge and awareness of customer and market demands, operating conditions and current regulations.

This breadth of experience supports the development and manufacturing techniques of our electrical products to exceed the industry standards.

Loadswitches

Overview

LoadSwitch is a mechanical device capable of making, carrying and breaking current under normal circuit conditions. Switches are safely disconnecting electrical systems from the power grid is essential to protecting humans as well as the systems themselves. LoadSwitches are available in a comprehensive portfolio of switching devices for safe and efficient switching of electrical equipment and Automatic/Manual changeover.

Loadline switches are suitable for large number applications like Motor control centres , switchboards and as a incomer in various equipment's and machines.

Loadline switches are available in Enclosed type and open execution.

switches are available in Motorized type for remote and automatic operation.

OnLoad Switch Disconnector

LoadSwitch OnLoad Switch Disconnector

L Type from 63A to 3150A

Overview

The Dorman Smith make L Type On Load Switch Disconnector is a 3 / 4 Pole, manually operated device for connection / disconnection of incoming supply & load. It ensures safe isolation and is suitable for use in individual enclosures, switchboards, lighting and power panels.

Main Features:

1. Conforms to IEC 60947-3
2. Available in 6 frame sizes, rated current from 63A to 3150A
3. Compact Design
4. Quick make & Quick Break mechanism (spring load contact)
5. Two stable positions (I-O)
6. Clear Indicator of 'ON' & 'OFF' position (I-O)
7. Line load reversibility
8. Arc chute plates to enhance contact life
9. High mechanical & electrical life
10. 100% neutral rating, true 4 pole switch
11. Vertical or lateral mounting
12. Resistant to tropical conditions & polluted environment
13. Total safety: All moving and live parts covered
14. Self-extinguishing fiberglass re-inforced insulating body
15. Terminal cover and phase barrier accessories available
16. Rotary handle with built in door padlock facility
17. Three lock pad lock, lockable in ON & OFF positions
18. Option for mechanically interlocking two isolators
19. ROHS Compliant
20. Wide range of accessories
21. High thermal & dynamic withstand capacity
22. Available in skeleton or housed
23. Option for direct operation or extended rotary handle
24. AC23 A Category
25. Bounce free contacts

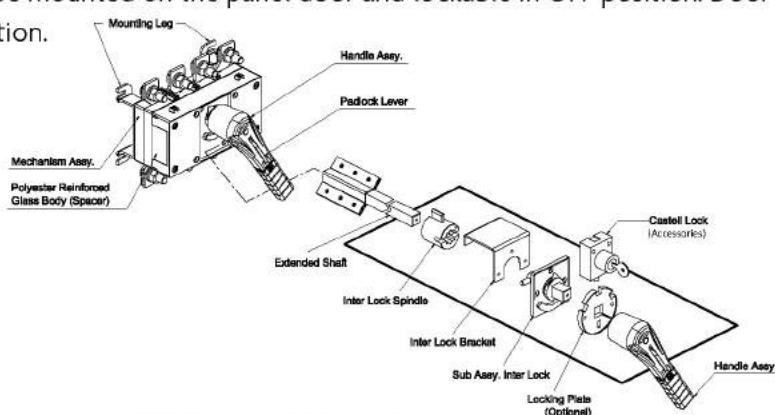

Operational Overview:

Direct

The pad lockable handle is mounted directly on the switch disconnector and is lockable in OFF & ON position.

External

The pad lockable handle is to be mounted on the panel door and lockable in OFF position. Door interlocking feature as standard in ON position.

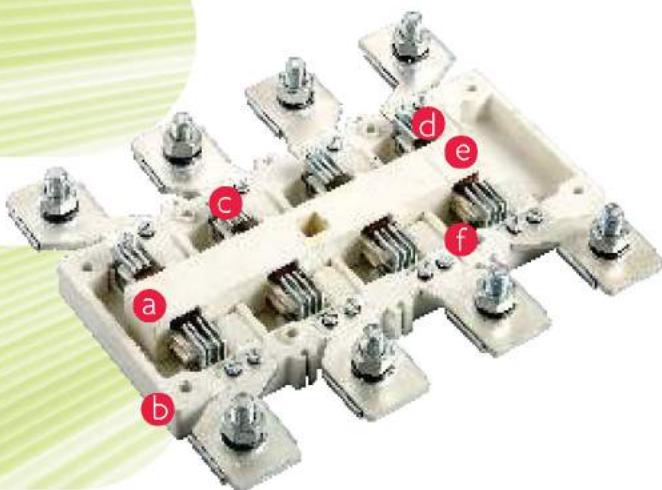

LoadSwitch

OnLoad Switch Disconnector

Arc Chamber:

It is specially designed and provided with arc chute plates with an arc channel as a flow guide to reduce the arc length. This improves the capability to extinguish the arc. This enhances the life of the moving and stationary contacts thereby increasing the life of the product.

LoadSwitch

OnLoad Switch Disconnector

Main Features:

- Black Handle Pad lockable in I – O position
- Sheet steel door – 1.2mm & body – 1.6mm for 63A to 800A
- Sheet steel door & body – 2.0mm for 1000A to 3150A
- RAL 7035, light grey
- Epoxy Polyester powder coating
- Two external earthing points on each side
- Wall mounted with 4 bolts
- **Door interlocking system allows opening of door only in OFF position**
- Incoming & outgoing easily interchangeable at site
- Removable plate top & bottom
- Door with solid hinges

OnLoad Changeover Skeleton Switch

Overview

LoadSwitch OnLoad Changeover switch

Key Features

- Quick Make & Quick Break mechanism.
- Any pole can be used as neutral pole.
- AC23 utilisation category
- Bounce free contacts
- Available in 3 stable positions with indications for Normal Power supply on, Standby power supply on and an OFF position (I-O-II).
- High Mechanical & Electrical life with 100% Neutral rating...true 4 pole switch.
- Available with Wide range of accessories.
- Suitable for incoming and outgoing feeders.
- Bridging bars mounted on all ratings as standard feature.
- Available in open execution and sheet steel Enclosure.
- visualized breaking
- Unique rotary handle with built in door padlock facility suitable direct front operation and External door mounted type
- Resistant to Tropical conditions & polluted environment.
- High thermal & dynamic withstand capacity.

Benefits

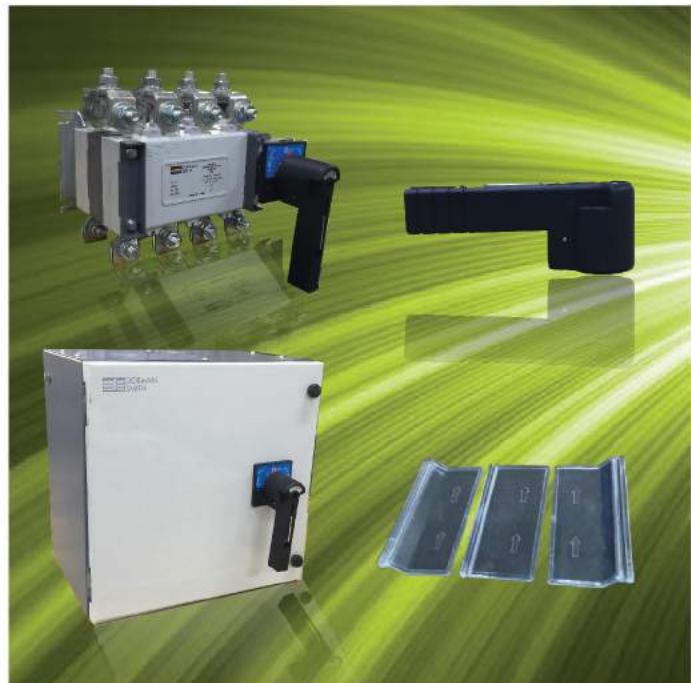

- Easy installation.
- Totally safety and Suitable for both aluminum & copper termination
- Compact in size
- Simple operation
- Safe to use

Compliance

- Switches EN 60947-3
- ROHS Compliant

The Dorman Smith Elegance series On Load changeover switch has been designed and manufactured in accordance with IEC/EN 60947-3. Given their utilisation category of AC23. Elegance series On Load changeover switch is compact design of 4 Pole manually operated switch consisting of two sets of terminals for connecting two incoming supply sources. These changeover switches are available in open Execution (Skeleton type) and sheet steel enclosure type. It ensures safe operation of On Load changeover between two source and safety isolation. These changeovers are suitable to use in individual enclosures, switch boards, lighting and power panels etc. The Elegance series product portfolio includes a wide range from 63A to 3150A in 6 Frame

On Load changeover switch units are supplied in IP55 sheet steel boxes also. The robust steel enclosures are with light grey RAL 7035 epoxy powder coating and have doors that open 90° for ease of access. Provision for padlocking in ON/OFF position available

LoadSwitch

OnLoad Changeover Switches

Operational Principle

Principle

Stationary contacts R, Y, B, N Phase are fixed to the moulded housing. 4 sets of moving contacts housed in a carrier are moved towards right for ON or left for OFF. The moving contacts slide on to the stationary contacts to make the circuit.

Position indication provided on front of switch, on the operating shaft.

In position 'I', supply I (Main) is connected to the load, supply II is off.

In position 'O', supply I & II are both disconnected from the load.

In position 'II', supply II (Standby) is connected to the load, supply I is off. Hence in none of the cases, supply I & II are connected simultaneously.

Technology

The Arc Chamber is specially designed and provided with arc chute plates with an arc channel as a flow guide to reduce the arc length, thereby improving the capability of extinguishing the arc. This enhances the life of the moving & stationary contacts thereby increasing the life of the product.

Body parts are made of superior quality of thermoset plastics to withstand the stringent short circuit conditions where it has to see very high thermodynamic stresses. Its high insulation strength avoids any damage to the product.

Handle: The pad lockable handle is mounted directly on the onload changeover switch and is lockable in both OFF & ON positions.

Handle : The pad lockable handle is mounted on the panel door and lockable in both OFF & ON positions. The external front operation ensures that the door is locked in ON position.

- a : OFF

- Quick Make & Quick Break mechanism.
- Adapted to Environments subject
- Any pole can be set as neutral pole.
- AC23 utilisation category
- Bounce free contacts
- 2 external Earthing points
- Available in 3 stable positions with indications for Normal Power supply on, Standby power supply on and an OFF position (I-O-II).
- High Mechanical & Electrical life with 100% Neutral rating...true 4 pole switch.
- Available with Wide range of accessories.
- Suitable for incoming and outgoing feeders.
- Bridging bars mounted on all ratings as standard feature.
- Wall mounted with 4 Bolts
- Door locking system open in OFF position only
- Door with solid hinges
- Epoxy polyester powder coating
- Incoming & outgoing easily interchangeable at site
- Removable plate top and bottom
- Door 1.2mm/Body 1.6mm sheet steel endosume

LoadSwitch OnLoad Changeover Switch

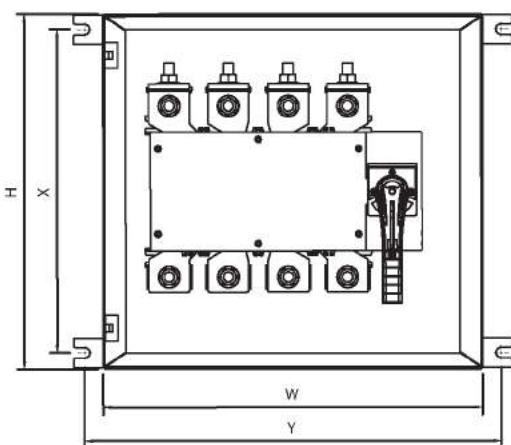

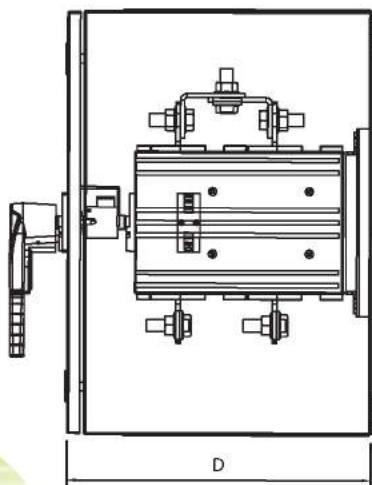

The Dorman Smith Elegance series Housed On Load changeover switch has been designed and manufactured in accordance with IEC/EN 60947-3. This enclosure provides protection against live parts as well as environmental factors like dust, water and other hazards. Elegance series On Load changeover switch is compact design of 4 Pole manually operated, consisting of two sets of terminals for connecting two incoming supply sources. The Elegance series product portfolio includes a wide range from 63A to 3150A in 6 Frame

Door Interlock Assembly

Door Interlock Assemblies used with extended handles to allow opening of enclosure door only when switch disconnector is in OFF position.

Auxiliary Contact:

Auxiliary contacts, with 2NO + 2NC can be fitted in the switch for signalling.

Source Separator:

Source separators are available as accessories used to isolate two source which provides protection against direct accidental touch with terminals and connecting parts. These are made of transparent polycarbonate flame retardant material. Source Separators are also eliminate possibility of flash over between two supplies due to accidental falling of external objects.

OffLoad Changeover Switch

LoadSwitch

OffLoad Changeover Switch

Overview

Dorman Smith Elegance offload changeover switches has been designed and manufactured in accordance with IEC/EN 60947-3. Given their utilization category of AC22, Elegance series offload changeover provides safe and reliable transfer of power from main source to another and vice versa. These Changeover Switches are available in epoxy powder coated sheet steel enclosure. The Elegance series offload changeover product portfolio includes a wide range from 16A to 2000A in 4 Frames.

Key Features

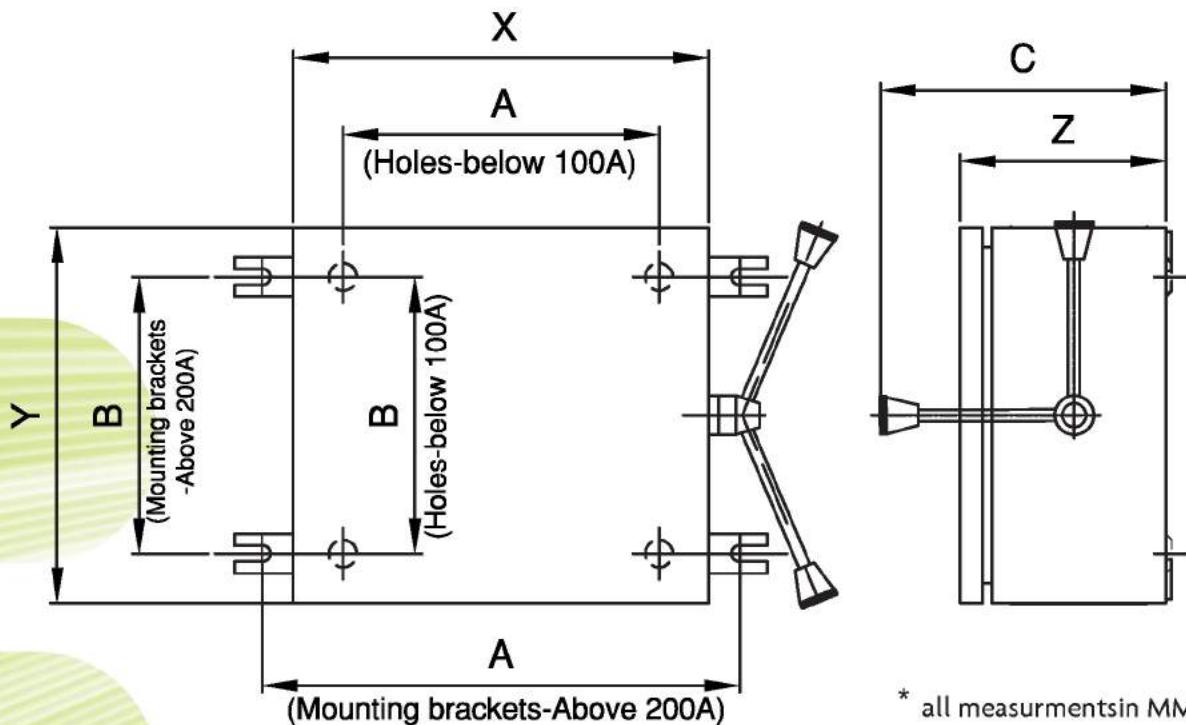

- Side operated with three position I-O-II. Normal Power supply on, Standby power supply on and an OFF position.
- Double pole and four poles version.
- Double pole version available in 32A & 63A - 240VAC and 4 pole from 16A to 2000A
- Suitable for Off Load applications
- Rated Voltage: 415V, 50Hz
- Provision for Door interlocking to ensure that door cannot be opened in "ON" position.
- Termination of Copper & Aluminum cables
- Moving current carrying parts are made of ETP Copper with Silver plating to increased contact life and to ensure low temperature rise at rated current.
- DMC Terminal blocks are provided for Cable termination with excellent Thermal & Dielectric properties Provided with adequate Knock Outs for cable entry and inner mounting holes for easy installation
- Quick make and Quick break mechanism.
- Knife Type mechanism.
- Arcing contacts provision in current rating 200 Amps and above.
- Suitable for individual mounting.
- Any pole suitable for Neutral.

MLB Frame ATS

(Switch Disconnector type)

Overview

The MLB Series Automatic Transfer Switch (ATS) has been designed and manufactured in accordance with IEC/EN 60947-6-1, Switch Disconnectors to IEC/EN 60947-3 & General rules IEC/EN 60947-1. MLB series ATS is a combination of motorized electro-mechanically interlocked switch disconnectors and are suitable for use in generator power panels, air conditioning and telecommunications.

Main Features

1. The MLB series ATS product portfolio includes a wide range from 20A to 3200A, 3 pole and 4 Pole motorized changeovers with voltage detection, frequency detection, electro-mechanical interlocking functions, automatic changeover and remote emergency manual control
2. It is integrated with control logic and an additional controller is not required
3. Automatic changeover between main power supply and backup power supply with safety isolation
4. ATS manufactured with fiberglass unsaturated polyester resin, with strong dielectric properties and having high level of protection and reliability in operation
5. Switch mechanism is with the double row type composite contacts, pre-stored energy side pulling motor with micro-electronics/control technology makes true zero arcing (no arc chamber required)
6. Single motor-driven transfer leading to reliable low noise, smooth operation switching
7. Four operation methods possible in MLB ATS:
 - Automatic control operations
 - Manual operation
 - Remote control operation
 - Emergency disconnected operation under automatic start
8. Easy Auto or Manual selection. Operating handle available for manual operation
9. Padlocking facility available on the switch body
10. Intelligent door mounted controller available as an option. This controller interfaces with ATS for Auto/Manual operation with status display. Automatic changeover time can be set within a range of 0-30s
11. Available in 3 stable positions with indications for Normal Power Supply ON, Standby Power Supply ON and an OFF position (1-0-11)
12. Enclosed type ATS available
13. Electrical key lock provided in ATS inhibits automatic operation and allows handle use when the key lock is in manual mode
14. ATS can be switched without any power source in Manual mode with operating handle
15. Contact us for other AC/DC Voltages

LoadSwitch

Automatic Transfer Switch

MLB Series

Enclosed ATS

MLB ATS is also available in enclosed Weather proof Enclosure (IP54).

Main Features

- Assembly confirms to IEC 61439-2
- Enclosure Type - Sheet Steel, epoxy powder coated to Light Grey as per RAL 7035
- Removable Gland plate: Top and Bottom from 20A to 250A
Bottom from 400A to 3200A

Operation Overview

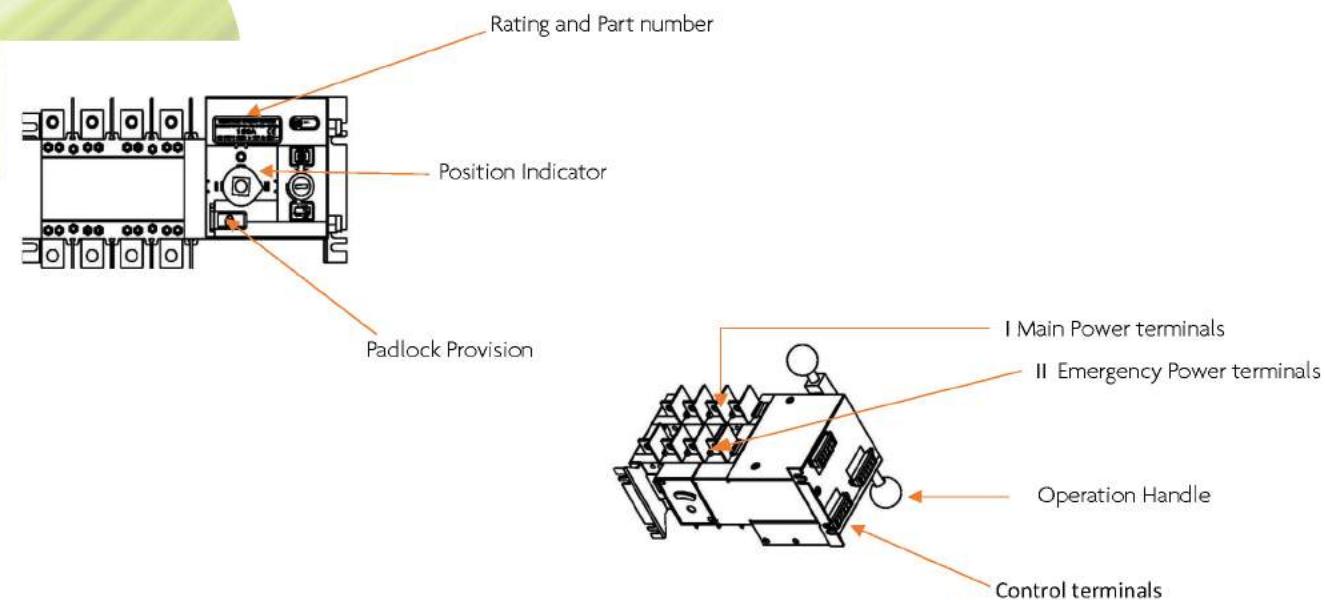

Automatic and Remote Changeover Operation Mode

MLB ATS is equipped with a 2 position electrical key lock. When this key lock is in Auto position ATS will operate as an Automatic changeover or Remote controlled changeover according to the control wiring. Refer wiring diagram for details.

When the key lock is in Manual position the ATS will operate as a Manual changeover with use of the operating handle.

Auto & Manual operations are possible with an intelligent controller. Selection can easily be made from the front panel which also displays the status of the ATS. Controller allows operator to select changeover time between 0-30s. MLB ATS is available with 2 types of controllers

ATS 20A to 3200A

MLB ATS is available with 2 types of Microprocessor based controllers

- Normal Standard type controller (MLBCN) with only key pad for selection.

Standard controller is door mounted type with front panel.

Auto/Manual selection is possible by selecting self-locking type button in front panel. Status indication available in the front panel.

- LCD Display type controller (MLBCD) with LCD Display and key pad.

Available with LCD display of 2 source parameters.

Auto/Manual selection is possible by selection button.

All selection and parameters are visible on LCD display.

• MLBCN/MLBCD controller wiring

F1, F2 & F3 terminals are used to start and close the generator. F is the common point.

When main power is normal, F and F2 is closed, F and F1 is open.

When main power is abnormal F and F1 delay by about 3 seconds and closes backup power and at the same time F and F2 will be open.

When R1, R2 are initiated the controller will switch ATS to double break position (OFF) L1, L2 user additional contact for.

LM Frame ATS

(MCCB type)

Overview

In today's modern world environment, it is essential for Buildings, Hospitals & Industrial Complexes to be able to rely on a continuous power supply. This reliability of power can be achieved by using Dorman Smith ATS.

Features

- Intelligent Microprocessor - Dual-Power Automatic Switching
- Transfer operation is initiated and controlled by a compact logic controller
- ATS comprising of motor operated Moulded Case Circuit breakers and interlocks
- Protection, Isolation and switching in one device.
- Complies to IEC 60947-1 General rule, IEC947.2
- Switching and IEC-60947-6-1 Automatic Transfer switch
- Control wirings are pre-wired to terminal strip
- External wiring is simple 6 wire for 2 power sensing and close and open indication outputs
- Indicator Flag for MCCB to show status of the MCCB
- ATS has three stable positions Normal power supply closed, Off and Standby power supply closed
- For Manual operation, switch controller to Manual mode
- ATS will sense the over voltage above 270V AC and under voltage 70-80% of rated voltage.
Time delay of changeover is adjustable from 0.5s to 30s
- ATS default start is in Normal power.
- No. of Mechanical Operations (Cycles) : 2500 – 5000 operations
- No. of Electrical Operations (Cycles) : 500 – 1000 operations

Technical Data & Applications

Switch

A switch is a mechanical device capable of making, carrying and breaking current under circuit conditions.

Disconnector (Isolator)

A disconnector is a mechanical switching device that provides the function of circuit isolation.

Switch Disconnector

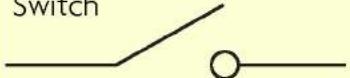

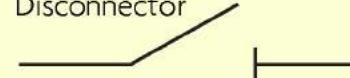

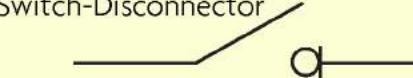

This device combines the functionality of the two foregoing devices; it provides making, carrying, breaking and isolation of current within a circuit.

Functional summary

Term	Features Provided	Features not Provided
Switch	Current rating Operational and insulation voltage Making and breaking of load Short time current rating	Isolation Protection
Disconnector	Current rating Isolation Operational and insulation voltage Short time current rating	Protection Making/Breaking capability

Suitability for purpose

All of these devices have the ability to carry rated current either continuously or for a period of eight hours under defined conditions. Selection and specification of a specific device depends upon the circuit application.

Function		
Making and breaking current	Isolating	Making, breaking and Isolating
Switch	Disconnecter	Switch-Disconnecter
		

Switching Applications

For switching applications, the principal functions and capabilities include:

Making and breaking operation

A switch must have the ability to make or break defined load and overload currents at a rated operational voltage, for the useful life of the device.

Short circuit action

The device must have the capability of handling short circuit current and/or through fault and/or fault making.

Protection

The device must interrupt the circuit under overload and/or short circuit conditions.

Isolation

To meet this requirement, the device must ensure disconnection of the supply for safe downstream working. Facilities must be included for safety padlocking in the 'off' position, together with positive indication of the contact position.

Neutral switching

Where the neutral is reliably earthed, it is accepted that the neutral need not be switched except in defined circumstances (e.g. the incoming switch disconnector in a consumer unit) even though the Wiring Regulations (BS 7671:2001) class the neutral as a current carrying conductor.

In applications where the neutral cannot be confirmed as reliably earthed, the neutral should be switched simultaneously with the phase(s) or alternatively arranged to make before and break after the phase(s).

Technical Data & Applications

Utilisation Category

The utilisation category defines the basic circuit conditions and the switching capability of the device.

Category	Circuit / application
AC20/DC20	<p>Connecting and disconnecting under 'no load'.</p> <p>Assumes all switching operations are carried out by other capable devices before this device is operated.</p>
AC21/DC21	<p>Switching of resistive loads including moderate overloads.</p> <p>Suitable for purely resistive type loads.</p> <p>Device can switch 150% of its rated current under fault conditions.</p>
AC22/DC22	<p>Switching of mixed resistive/inductive loads, including moderate overloads.</p> <p>Suitable for mixed resistive/inductive loads.</p> <p>Device can switch 300% of its rated current under fault conditions.</p>
AC23/DC23	<p>Switching of highly inductive loads.</p> <p>These devices are provided principally as back-up to other means of switching, e.g. contactors. In the event of failure of the functional device, the AC23/DC23 device can safely interrupt a stalled motor current. Where devices are the only means of controlling individual motors they should comply with the requirements of Appendix A of the EN 60947-3 standard.</p>

Note: Switch disconnectors for AC21/DC21, AC22/DC22 and AC23/DC23 categories also have to meet the requirements of AC20/DC20.

For specific and special applications such as switching of capacitors and tungsten lamps not covered by the EN 60947-3 standard the manufacturer's advice should be sought.

Frequent and Infrequent Use

The designation 'A' or 'B' should be appended to utilisation categories to indicate the suitability for frequent or infrequent use in service. The 'Rule of Thumb' definition for full load current switching duty is:

Frequent (A): Up to five times a day for small devices, say up to 100 amps, and once per week for larger devices.

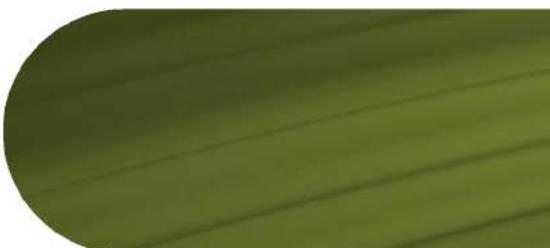

Infrequent (B): One per week for the smaller devices and once per month for the larger devices.
